VAWG DASHBOARD — GRAPH TYPES & DESCRIPTIONS

Each graph is paired with its description. Chart proportions are preserved to prevent stretching or distortion.

1. Pie chart

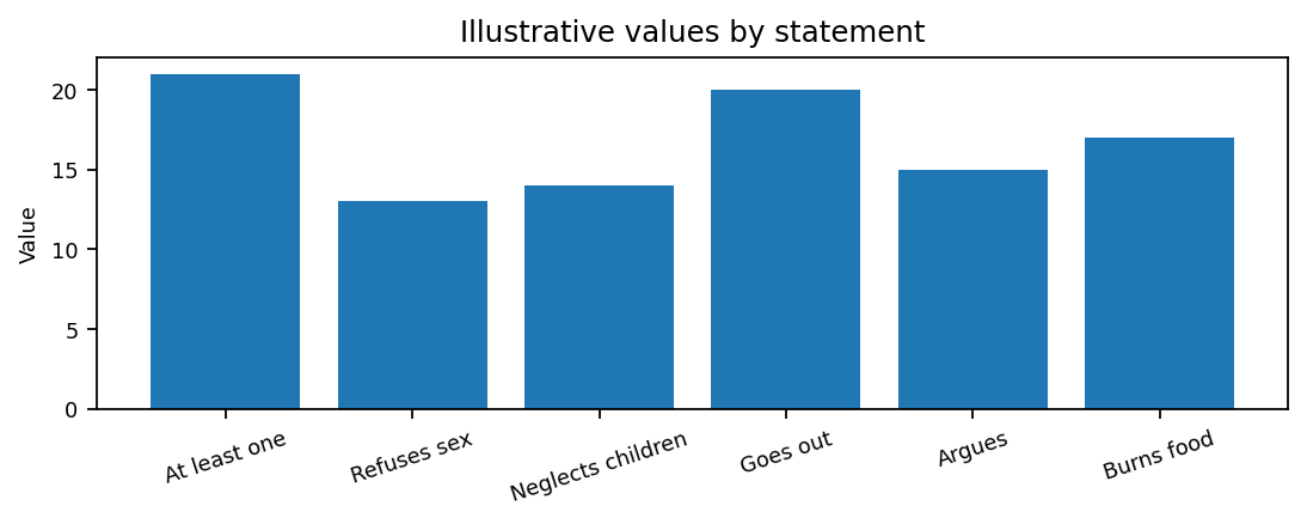

Shows how a whole is divided into categories. Each slice represents one category's share of the total. Use it for a small number of mutually exclusive categories.

2. Bar chart

Compares values across discrete categories using vertical bars. Taller bars indicate larger values; useful for ranking statements or groups.

VAWG DASHBOARD — GRAPH TYPES & DESCRIPTIONS

Each graph is paired with its description. Chart proportions are preserved to prevent stretching or distortion.

3. Horizontal bar chart (barh)

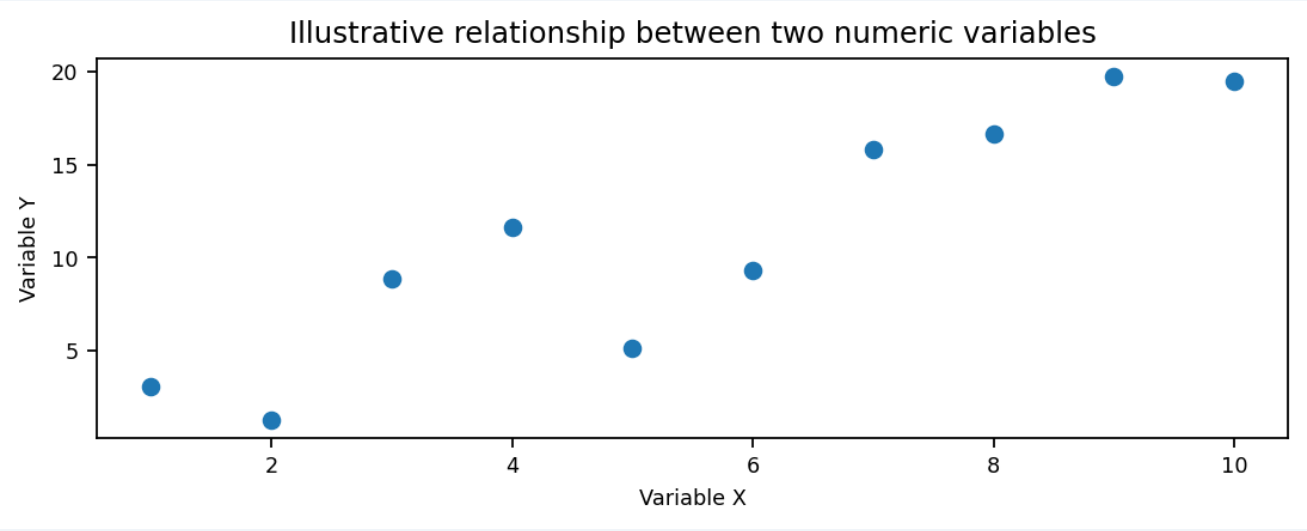

Compares categories with horizontal bars. It is especially useful when category names are long and need to remain readable.

4. Scatter plot

Displays individual observations as points to examine the relationship, clusters, and possible outliers between two numeric variables.

VAWG DASHBOARD — GRAPH TYPES & DESCRIPTIONS

Each graph is paired with its description. Chart proportions are preserved to prevent stretching or distortion.

5. Box plot

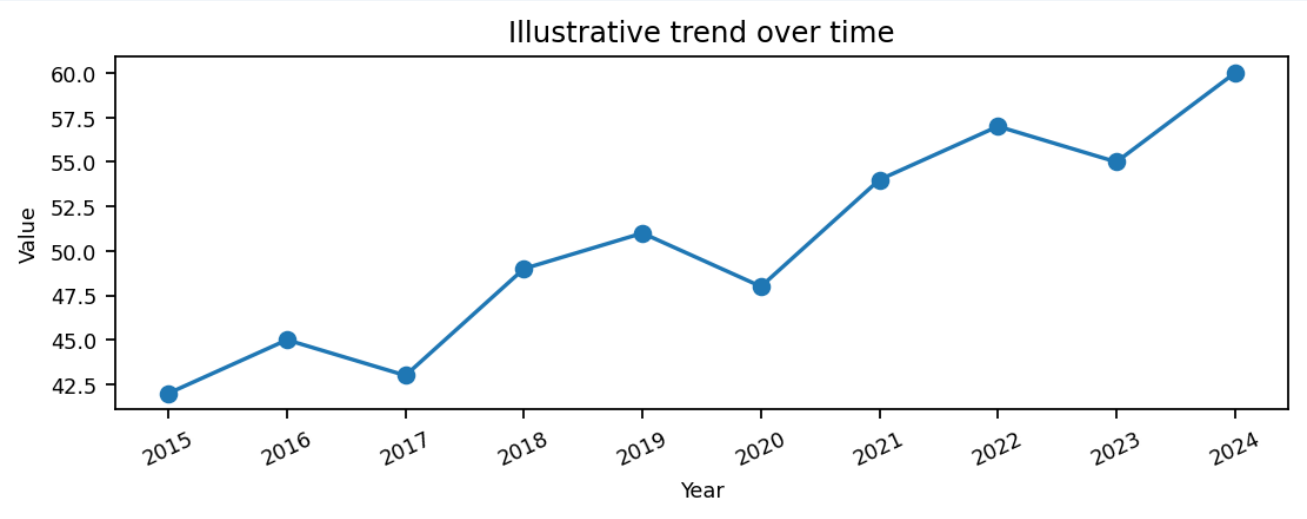

Summarizes the distribution in each group using the median, quartiles, whiskers, and potential outliers. Useful for comparing spread.

Illustrative preview — not calculated from survey records

6. Line chart

Connects values in time or another ordered sequence. Use it to show trends, changes, peaks, and declines over time.

VAWG DASHBOARD — GRAPH TYPES & DESCRIPTIONS

Each graph is paired with its description. Chart proportions are preserved to prevent stretching or distortion.

7. Histogram

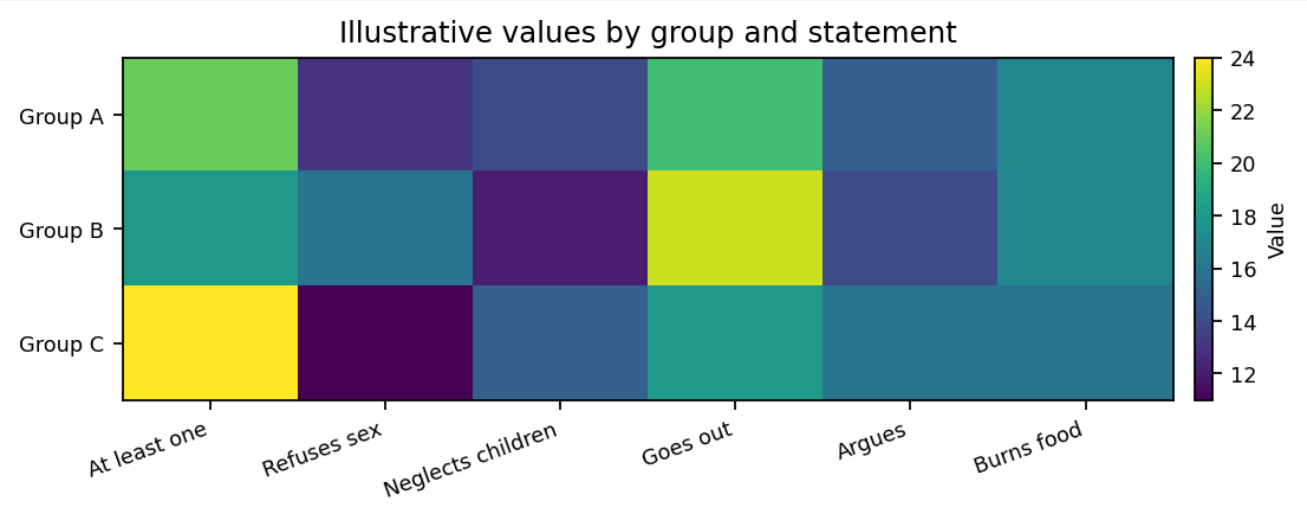

Groups a numeric variable into intervals and shows how many observations fall in each interval. It reveals shape, spread, and skew.

8. Heatmap

Uses color intensity to show values across two categorical dimensions. It helps identify high and low patterns across groups and statements.

VAWG DASHBOARD — GRAPH TYPES & DESCRIPTIONS

Each graph is paired with its description. Chart proportions are preserved to prevent stretching or distortion.

9. Correlation plot

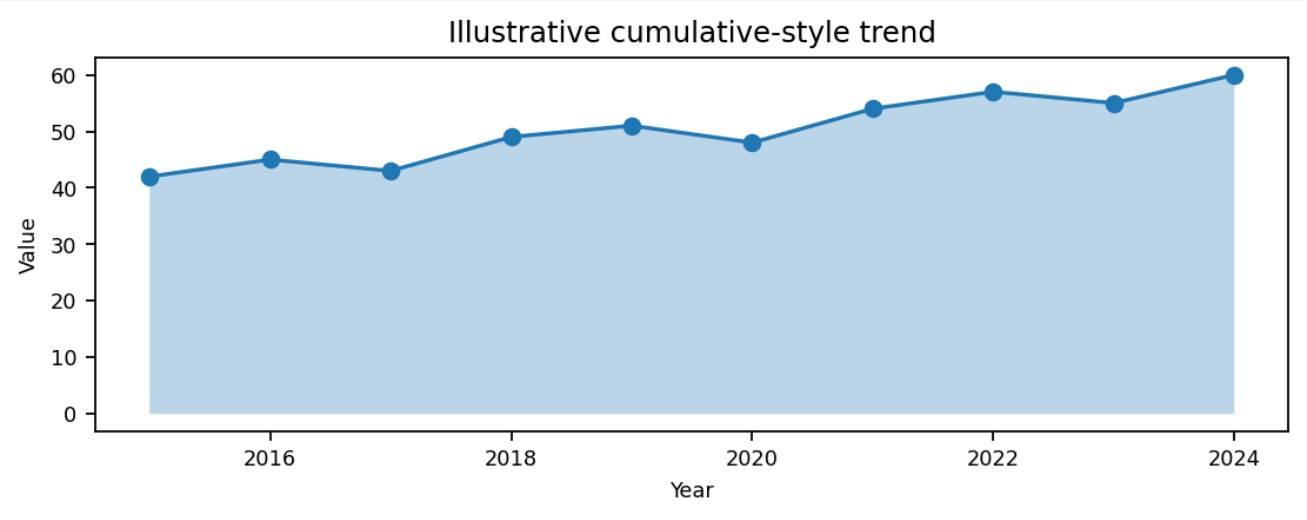

Shows the direction and strength of association between two numeric variables, often with a fitted trend line. Correlation does not prove causation.

Illustrative preview — not calculated from survey records

10. Area chart

Emphasizes the magnitude of change over an ordered sequence by filling the area beneath a line. Use it for trends where volume matters.
